

Evan Liu

Boston, MA | eliu23@bu.edu | 206-334-3224 | <https://github.com/evanl23>

Education

Boston University | Boston, MA

May 2027

B.A. in Economics and Computer Science

- 3.80 GPA (Dean's List)
- Division 1 athlete on BU Men's Swim and Dive Varsity program
- **Relevant Coursework:** Computer Systems, Algorithms, Database Management Systems

Relevant Experience

Azabu Insights | Tokyo, Japan

June 2025 – Present

Software Engineer

- Engineered production-ready AI voice agents using OpenAI Whisper + GPT APIs to automate patient intake, reducing average onboarding time for clinics in Japan
- Designed and implemented responsive UI components in React + Tailwind with accessible layouts and transitions, improving usability across desktop and mobile

Finance & Investment Club | Boston University

Sep 2023 – Dec 2024

Senior Quantitative Researcher / Developer

- Built and backtested multiple algorithmic trading strategies with MACD and Bollinger Bands indicators
- Refined trading algorithms by training on past financial data and ultimately implementing on recent pricing to calculate potential returns
- Analyzed risks of stock portfolios by examining size, value, and market risk factors by applying the Fama French Factor Model

Projects

SMS-Based AI Productivity Assistant

github.com/evanl23/AI-Texting-Assistant

(200+ users | \$1,500 in BU funding)

- Engineered a Dockerized Flask backend hosted on Google Cloud Run, integrating Twilio webhooks for SMS interactions, OpenAI APIs for background NLP processing, and Firestore for persistent user data storage
- Implemented advanced natural language understanding with intent classification, fuzzy string matching, and personalized memory features, enabling agentic, context-aware conversations for 200+ users
- Integrated Google OAuth 2.0 using google-auth libraries to securely authenticate users and manage token lifecycles for Gmail and Calendar integrations
- Selected for BU's Innovative Pathway Program and secured \$1500 in funding

Cloud-Hosted Raman Spectroscopy Query System

github.com/evanl23/RamanSpectroscopy

- Deployed a serverless FastAPI backend on AWS ECS Fargate to process and query Raman spectroscopy data captured by a detachable iPhone device for chemical substance identification
- Containerized the backend using Docker and pushed production-ready images to AWS ECR; used Qdrant vector database for similarity search on Raman spectra embeddings (3K+ spectra indexed)
- Configured scalable AWS infrastructure with ALB and VPC to enable public access and route HTTP requests for real-time querying of chemical signatures

Terminal Music Visualizer in Bash with Homebrew

github.com/evanl23/saturn.fm

- Created an interactive terminal-based music visualizer in Bash using named pipes (FIFOs) for inter-process communication, ffmpeg for real-time audio amplitude analysis, and awk for frame interpolation and clamping to control animation timing
- Deployed a custom Linux server with Nginx configured to serve web requests, utilizing shell scripting, Unix process management, and server provisioning in a production environment
- Packaged the interface with a custom Ruby Homebrew formula, enabling installation on macOS
